Abstract

In Cambodia, there are many computer shops and some of the shops in Cambodia don’t use the web system to prove their business well. That is the cause that can make the shops or the companies cannot increase income, furthermore there are many problems for the customers that they are far away from the shops or the customers who live in countryside that make them hard for travel to buy the products. These are the problems the companies or shops need to be solved.

Web implementation and design for e-business can solve the problem above. Mean it can help to owner companies or shops to prove their business and to increase their customers or make the customers loyal to their companies.

The last, the author hopes this project can make customer easier to buy and to pay by online and to improve the business of the owner too. And the author strongly believes that all the companies or shops in Cambodia and the customers need this system so much.

Keywords: E-business, Online Shop, Web Implementation.
